

# St Andrew's Herb Garden

Summer 2022

The Garden, planted as part of the A Rocha scheme, has now established itself along the North End wall of the Church. Shrubs and plants have been introduced, donated by Church members. This is a shady area and they have thrived throughout the periods of heat. Many will be familiar to you and so far identified are Mint, Wild Marjoram, Chives, Meadow Crane's Bill (*which arrived amongst the herb plants*), Woundwort, Sage, Rosemary and Bay. *There was also the occasional Michaelmas Daisy amongst the plantings.*

This is a mixture of herbs for medicinal and culinary purposes, which may be found in gardens and patio pots in many a garden area. All welcome sources of food for insects. Other areas of the St. Andrew's Garden support various herbal plants such as Lavender, Perforate St. John's-wort, Feverfew, and Willow herb.
